# Condensate Canopies / Steam Hoods

Moisture control for your catering environment

Kitchens, as a rule are areas where moisture is part of the working day. Just cooking food releases moisture into the environment, making the air more humid. When you introduce ware washing solutions into a catering environment the moisture levels increase dramatically, and in a kitchen that's not always good for the food or the staff.

Condensate canopies (also known as steam hoods) are designed to manage and expel excess moisture produced by high steam output equipment like dishwashers, combination ovens and atmospheric steamers. Fitted above equipment, these canopies allow steam laden air to be safely captured.

They are fitted with a sloped condensation plate which, on contact with steam turns it into water and then directs it into a drain off, keeping it out of the air and reducing overall environmental humidity.

The result is less humidity, drier surfaces and a safer, more comfortable working environment.

No problem, simply install your table and measure your gap 'X'. Then ring Parry sales on 01332 875544 and we will manufacture you a bespoke piece that will fit onto your table upstand and up to your kitchen wall at NO EXTRA COST, all that you will pay for is the delivery.

# Stainless Steel Cleaning and Care

## How to keep your Parry Stainless Steel Cleaning Product Clean

### **Day to Day Cleaning**

Most marks, substances or dirt can be removed with a warm damp cloth and mild detergent, making sure you dry the surface with a soft cloth to prevent water marks. For more persistent marks, use a non-abrasive multipurpose cream cleaner, without any added bleach. This is best applied with a soft damp cloth. Heavy duty burnt on grease and dirt may require the use of a non-metal scouring pad in conjunction with a multipurpose cream cleaner.

### **Removing Heavy Marks**

A soap and water solution can be used to clean oil, grease and fingerprints, but a hydrocarbon solvent may be required for more persistent soiling. Extra care must be taken to use the proper safety procedures and precautions if using solvents – in line with COSHH regulations. Glass cleaner is also very effective at removing fingerprints on surfaces with a highly polished finish.

### **Looking After The Stainless Steel Finish**

Any cleaning solutions that contain bleach (sodium chloride) should not be left in contact with stainless steel for longer than 30 minutes maximum. If bleach is necessary, it should be used only in the strength outlined on the manufacturer's instructions and packaging and never left on too long.

### **Preventing Surface Scratches in Stainless Steel**

Never use harsh abrasives or scouring materials for cleaning stainless steel, as they will scratch and leave marks on the surface. Do not use scouring pads, wire brushes or scrapers and make sure they are clean and free from contaminants. Any aggressive cleaning, especially with a soft scouring pad should be carried out along the line of the grain or the metal, never across it as this will help to avoid scratching the steel.

### **Never Leave Surfaces Wet**

It is important to remove anything wet, especially cleaning cloths, pads and containers from the surface as this will avoid water marks and stains. Most domestic dish-washing liquids contain chlorides which if are left in contact with the stainless steel for a prolonged period will likely result in corrosion and pitting marks to form. Please also be aware of silver dip cutlery cleaners as they contain strong acids which are very harmful and quickly cause discoloration and pitting.
